

Uploading & Managing Content

Know Thyself by Anurag Rishi — Step-by-step for the admin team

The admin dashboard is a secure website. Sign in with your admin email and password. The left sidebar is your main menu:

Dashboard · Users · Devices · Videos · Audios · Courses · YouTube · Membership · Coupons · Categories · Help & Support · Analytics · Settings.

Golden rule for cover images: upload the exact size and shape below and **crop** the subject to fit — never pad an image with black bars to force a shape, or you will see the bars in the app.

- **Audio cover:** SQUARE (1:1) — **672 × 672 px**
- **Course / video cover:** WIDESCREEN (16:9) — **1280 × 720 px**

1. Upload a single Audio

1. In the sidebar, open **Audios**.
2. Click **Upload** (top of the page).
3. Fill in the fields:

Field	What to enter
Title	The name of the meditation / talk.
Artist	Who it is by (e.g. Anurag Rishi).
Description	A short summary shown under the title.
Language	Language code, e.g. en for English, hi for Hindi.
Premium content	Tick ON for members-only; untick for free content. (Default: ON.)
File	The audio file (MP3 / M4A).
Cover image	Square 672 × 672 px (see golden rule above).

4. Click **Upload** / **Save** and wait for the confirmation. The audio appears in the app shortly after.

2. Upload many Audios at once (bulk)

1. Open **Audios** → choose **Upload multiple**.

2. Select several audio files together.
3. For **each** file, edit its own **Name**, **Artist** and **Description**.
4. **Premium** and **Language** are set once and apply to the whole batch.
5. Click upload — every file is processed in one pass.

Tip: bulk upload is the fastest way to add a series. You can still fine-tune any single item afterwards by opening it from the Audios list.

3. Add a Course

1. Open **Courses** → **New course**.
2. Enter the course **title**, **description**, **price** (if sold), and upload a **16:9 cover (1280 × 720 px)**.
3. Open the course and add **lessons** — each lesson is either a **video** lesson or a **text** lesson.
4. Video lessons upload to **Bunny Stream** automatically; text lessons are typed in directly.
5. Arrange lessons into modules in the order learners should follow.

4. Videos & YouTube

- **Videos** — standalone video content (delivered via Bunny Stream).
- **YouTube** — paste a YouTube link; the thumbnail is fetched automatically, so there is nothing to upload.

5. Categories, Membership & Coupons

- **Categories** — create the groups that organise audio in the app; assign content to a category when you upload it.
- **Membership** — set up and activate the subscription plan(s). **At least one plan must be marked active**, or there is no price to charge.
- **Coupons** — create discount codes for checkout.

6. Help & Support (replying to users)

1. Open **Help & Support** to see incoming tickets.
2. Click a ticket to read it and **reply** — the user sees your reply inside the app.

7. Users, Devices & Analytics

- **Users** — view members and their access.
- **Devices** — see / reset the device a member is locked to (for support cases).
- **Analytics** — usage and content performance at a glance.

A quick daily checklist: upload with the correct cover size → set Premium correctly → assign a category → check it appears in the app → answer any open support tickets.
